

SIPRNET Applications Transition to NMCI

Jim Clager
EBSS Division of MARCORSYSCOM

20 May 2004

SIPRNET Legacy Applications

NMCI
NAVY MARINE CORPS INTRANET

A NOTE ON TERMINOLOGY:

An application that runs on a SIPRNET computer or network is not necessarily classified. Yet you will often see the word “classified” when referring to any application running on SIPRNET. To be precise, SIPRNET is the environment and applications in that environment can be either unclassified or classified.

Guidance, Procedures, Tools

NMCI
NAVY MARINE CORPS INTRANET

- Many of the tools and procedures used for transitioning NIPRNET applications will apply to SIPRNET
- The guiding document continues to be the Legacy Application Transition Guide (LATG)
 - As modified in practice due to EBSS's role in managing the USMC Applications Rationalized List in ISF Tools and MCAP
 - Appendix F is specific to SIPRNET
- Handling of name-classified applications will be per the EDS document "NMCI Legacy Applications Submission Guide"
- The greatest asset for this endeavor is already in place - the network of experienced CTR's, STOIC's, and MCTOIC's at all of the USMC transitioning sites

Program of Record (POR) Systems

NMCI
NAVY MARINE CORPS INTRANET

- **In general, based on discussions involving GCCS and similar systems, we do not expect to conduct NMCI Certification testing or LADRA testing of applications that are fielded as a Program Of Record (POR) system since they will not be installed on NMCI seats nor managed by EDS.**
- **Similar Systems (?)**
 - AFATDS
 - IOW
 - TCO
 - TBMCS
 - Etc...
- **All other applications intended for installation on NMCI seats will require Certification and LADRA testing.**

- **ISF Tools does not provide a view or report that displays the Rationalized applications by their “classification code” (NIPRNET Only, SIPRNET Only, or NIPRNET and SIPRNET) Vickie King at EBSS is working with ISF Tools developers to fix that.**
 - Meanwhile, the Marine Corps Application Portfolio (MCAP) database will be modified so that every Rationalized application entry will include a “classification code” field. This will be done via a weekly CSV dump from Tools that EBSS is already receiving to update certification status.
 - One or more of the existing Reports in MCAP will be modified to include the “classification code” so that MCAP users can download and manage that data locally as desired.
 - Target date for completion of the MCAP modification (including the Reports) is Tuesday 1 June 2004.

1022 of 1022 Application(s)

Application Long Name (Acronym) [Version]	COTS/ GOTS	FAM Status	NADTF Status	App Status	RFS # (Usage)	Certification Status
Template - WFTBN - MCRD SAN DIEGO - CAMP PENDELTON						
2002 USMTF User Format (USMTF) [2002]	GOTS	Disapproved	Not Reviewed - 0	Rationalized	10533 (2)	Certified (Ready for DSL)
2003 USMTF User Formats - United States Message Text Formatting (None) [2003]	GOTS	Allowed with Restrictions	Not Reviewed - 0	Rationalized	78020 (3)	Failed
3D EYEWITNESS (None) [7.8]	COTS	Not Reviewed	Not Reviewed - 0	Rationalized	85289 (1)	Audit in Process

General Reporting Guidelines

- If an application exists on a *non-POR* SIPRNET machine, but is NOT listed in the Rationalized List, then that site's CTR or STOIC must submit the application to EBSS for inclusion in the USMC Rationalized List
- Only applications in the USMC Rationalized List are to be chosen for inclusion in a site's classified listing (IG)
- The classified Implementation Group (IG) listing in ISF Tools will initially be blank - no entries - and site CTR's will need to populate this list with the applications that reside on their site's SIPRNET workstations
- Non Baseline COTS will still require a waiver to C4

LADRA Testing of SIPRNET Applications

NMCI
NAVY MARINE CORPS INTRANET

- **All legacy applications to be deployed to NMCI must undergo LADRA testing. LADRA testing for SIPRNET applications are complicated due to:**
 - The need to find an adequate secure test location at each USMC transition site.
 - Coordination of personnel (Govt and EDS) access to spaces and networks.
 - Storage containers for media, documents, and other materials related to LADRA
- **Many unclassified applications are already AIT certified and/or LADRA testing on NIPRNET**
- **Any “new” unclassified or classified apps will be able to get initial pre-validation testing, MSI packaging, and LADRA testing all on-site.**

- Subsequent additional guidance, as needed, on the transition of SIPRNET applications will be posted to the NMCIINFO web site and announced via a USMC Enterprise Applications Advisory e-mail

The screenshot displays the NMCIINFO website interface. At the top, there is a navigation bar with links: Recruiting, HQMC, Units, Career, Marine OnLine, News, Family, Publications, Locator, and Links. Below this is a search bar and a secondary navigation bar with links: Search, Policy / Guidance, Lessons Learned, Related Links, and Request a Brief. The main content area is titled "Navy Marine Corps Intranet > Legacy Applications > SIPRNET Application Information". It features a table with two columns: "Title" and "Dated". The table lists several items, including "SIPRNET Applications Transition Guidance" dated "04/07/04". On the left side of the page, there is a sidebar menu with various links, including "Legacy Applications", "NMC Contract", "Performance", "Personnel Transition", "Policy", "Program Information", "Regional Information", "Schedule Info", "STAT", "Transition Info", "Transition Mgmt", and "USMC COI". The bottom of the page includes the "FIRST GOV" logo and a footer with contact information for Ms. Lynda Lukschander, Web Publisher, and links to Privacy and Security Notice and External Link Disclaimer. The footer also states "Last Modified: 05/19/2004".
